### **DETAILED ACTION**

1. This is a notice of allowance in response to the applicant's communication filed on April 03, 2009.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was given in a telephone call with S. Stuart Lee Reg. No.: 61, 124 on April 10, 2009; and the claims has been amended as follows:

#### **LISTING OF CLAIMS:**

1. (Currently amended): A moving image watermarking method using a human visual system, comprising the steps of:

a) obtaining a watermark value by exclusive-ORing a random key value and a binary value of a logo image;

b) separately performing a plurality of masking operations, wherein the plurality of the masking operations are separately performed on identical moving image data;

c) obtaining a global masking value through the separately performed masking operations;

Art Unit: 2437

d) obtaining a watermarked frame value by adding the watermark value weighted by the global masking value and a control variable, to an original frame value; and

e) inserting a watermark into a moving image frame using the watermarked frame value;

~~wherein the step b) comprises the step of performing a motion masking operation.~~

2. (previously presented): The watermarking method according to claim 1, wherein the step b) further comprises the step of performing a spatial masking operation.

3. (previously presented): The watermarking method according to claim 2, wherein the performing the spatial masking operation comprises the steps of:

adjusting contrast of the moving image frame; and

extracting edges from the contrast-adjusted frame.

4. (Currently amended): The watermarking method according to claim 2, wherein ~~the~~ performing ~~the~~ a motion masking operation comprises the steps of:

obtaining a luminance difference between a current frame and a previous frame; and  
extracting edges from the current frame.

5. (original): The watermarking method according to claim 2, wherein the step b) further comprises the step of performing a frequency masking operation.

Art Unit: 2437

6. (previously presented): A moving image watermarking method using a human visual system, comprising the steps of:

a) obtaining a watermark value by exclusive-ORing a random key value and a binary value of a logo image;

b) separately performing a plurality of masking operations;

c) obtaining a global masking value through the separately performed masking operations;

d) obtaining a watermarked frame value by adding the watermark value weighted by the global masking value and a control variable, to an original frame value;

e) inserting a watermark into a moving image frame using the watermarked frame value;

f) comparing an image quality of the watermarked frame with an image quality set to a target; and

g) decreasing the control variable by a predetermined value if the image quality of the watermarked frame is less than the target image quality, and increasing the control variable by a predetermined value if the image quality of the watermarked frame is greater than the target image quality.

7. (original): The watermarking method according to claim 6, wherein the image quality is estimated on the basis of Peak-Signal-to-Noise Ratio (PSNR).

Art Unit: 2437

8. (previously presented): The watermarking method according to claim 1, further comprising the step of f) extracting the watermark, the step f) comprising the steps of:

subtracting the watermarked frame value from the original frame value to obtain a subtracted result value; and exclusive-ORing the subtracted result value and a random variable obtained by a key value, and obtaining an exclusive-ORed result.

9-10. (canceled).

11. (Currently amended): A recording medium for storing computer programs for executing a moving image watermarking method using a human visual system, the moving image watermarking method comprising:

a) obtaining a watermark value by exclusive-ORing a random key value and a binary value of a logo image;

b) separately performing a plurality of masking operations, wherein the plurality of the masking operations are separately performed on identical moving image data;

c) obtaining a global masking value through the separately performed masking operations;

d) obtaining a watermarked frame value by adding the watermark value weighted by the global masking value and a control variable, to an original frame value; and

e) inserting a watermark into a moving image frame using the watermarked frame value;

~~wherein the step b) comprises the step of performing a motion masking operation.~~

12.-15. (canceled).

### **Reason for allowance**

4. After consideration of the applicant's communication filed on April 03, 2009 in the After Final in response to the Final Office Action mailed on February 03, 2009, and through examination of claims 1-7 and 11; and further search, the claims have been found in condition for allowance over prior arts of record.

5. The following is an examiner's statement of reasons for allowance:

Claims 1, 6 and 11 include the following features which are not taught or further suggested and would not have been obvious over prior arts of record and these claimed features are: obtaining a watermark value by exclusive-ORing a random key value and a binary value of a logo image; separately performing a plurality of motion masking operations on identical moving image data; obtaining a global masking value through the separately performed motion masking operations; obtaining a watermarked frame value by adding the watermark value weighted by the global masking value and a control variable to an original frame value; and inserting a watermark into a moving image frame using the watermarked frame.

In light of the specification (see paragraphs 08 and 11), the step of "separately performing a plurality of masking operations" comprises the steps of performing a spatial

Art Unit: 2437

masking operation, and performing a motion masking operation, and may further comprise the step of performing a frequency masking operation.

The **spatial masking operation**: adjusting contrast of the moving image frame; and extracting edges from the contrast-adjusted frame (See applicant disclosure paragraph 0009).

The **motion masking operation**: obtaining a luminance difference between a current frame and a previous frame; and extracting edges from the current frame (See applicant disclosure paragraph 0010).

The **frequency masking operation**: is obtained on a DCT-based visual model of Watson by dividing an image into 8\*8 blocks and calculating a frequency masking value using a frequency sensitivity table which is an experimentally measured quantity to represent a minimum DCT coefficient detected within a corresponding block when masking noise is not applied to the block with respect to each of blocks (See applicant disclosure paragraph 0032).

Prior art of record neither teaches nor suggests the above claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
